CSC 202, Getting a Twitter Developer Account

One of the modules in this course will involve accessing and analyzing data from Twitter. In order to prepare for this, you should do the following:

1. Sign up for a Twitter account if you do not already have one: https://twitter.com/
2. Apply for a developer account by following the instructions here: https://developer.twitter.com/en/apply-for-access.html

Under account details, select that you are requesting access for personal use; When asked for 'use cases' you should select 'Student project / learning to code'. When asked to describe what you are building, you can say the following:

```
I am taking an Introductory Programming course at Eastern Connecticut
State University which is being taught by Dr. Dancik
(dancikg@easternct.edu). During class, we will learn how to access
Twitter's API in order to download samples of tweets and to look up
users. Usage will be limited to a few course assignments and no
Twitter information will be displayed or presented outside of the
course.
```

It is important to complete this right away because it may take several weeks for your request to be approved. If you have any questions I can help walk you through this process.
